- ② How to develop applications using Python?
- ③ PVM

How to develop applications using C/C++?

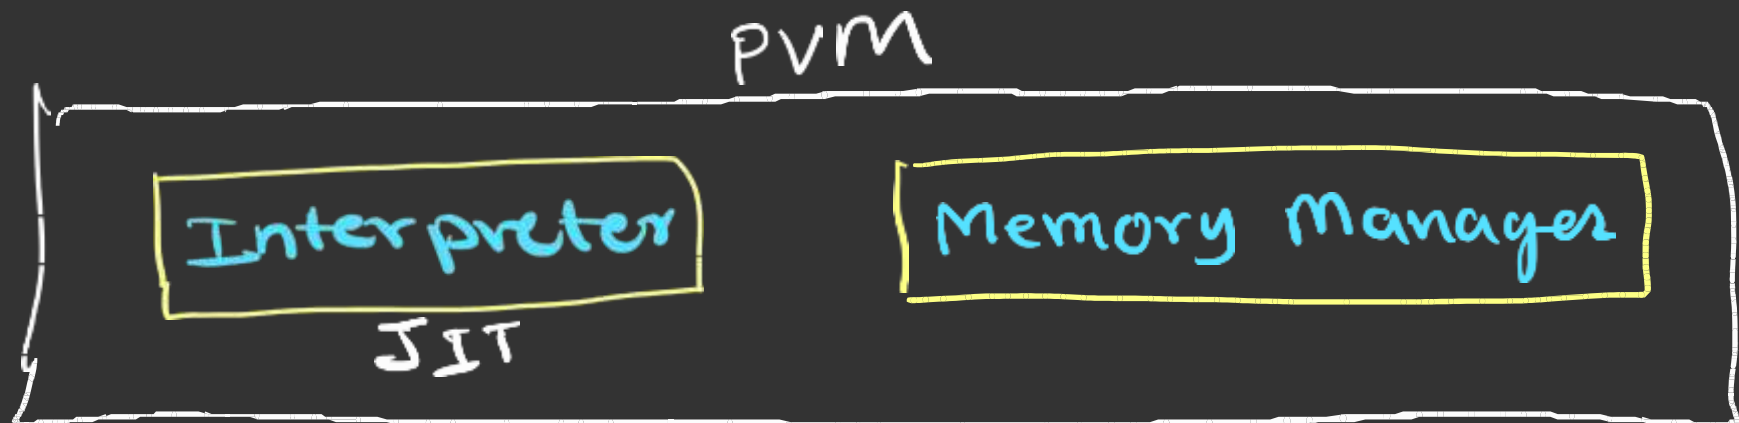

How to develop a software using Python?

PVM

The role of Python virtual machine (PVM) is to convert the byte code instructions into machine code so that the computer can execute those machine code instructions and display the final output.

Compile .py file to .pyc file

- 1) Open command prompt from the current folder
- 2) Type below line :

```
python -m py_compile filename.py
```
